

WEB BASED ASSET TRACKING MANAGEMENT SYSTEM

WATMS 3000

New Level of Asset Awareness

Hassle free tracking system—what, when, where, how many, how valuable—about asset-related inventory and its usage. Web Based Asset Tracking Management System (WATMS) records asset movements and adjustments, allowing for real-time asset tracking, reporting and auditing.

Web Based Asset Tracking Management System or WATMS is a web based application for the automated tracking of all moveable assets within an organization. With the WATMS, authorized personnel within the organization can obtain an overview of where all of the organization's assets are currently located and also track the movement of individual asset as they go through their lifecycles from the moment of purchase to disposal.

- Easy Access to your Asset Tracking Management System via Web.
- Accessible via PC, Tablets and Smart Phone
- Integrates with mobile devices with numerous pre-made scanner routines.
- Integrates Active RFID tag technology for advanced security requirements (add on).
- Supports multi location organizations
- Link assets to users and locations to easily determine where they are.
- Complete Inventory reconciliation features
- Link documents and images to your assets
- Detailed data importing and exporting tools included

Web Based Application

WATMS application is web based, which offers a huge set of advantages over traditional systems:

Reports are accessed via Web Browsers already installed on your PC's.

This application is accessible via:

- PC
- Tablet
- Smartphone (e.g. iPhone, Android)

Track and Manage Assets

Track and manage the registered assets at your company—including PC and IT components, tools, furniture, electrical equipments, and consigned inventory. Simply tag your assets with a barcode scanner (RFID scanner – ad on), and record all the asset details in the system. This application also allows embedded images of an asset to be displayed in the catalog search.

Search and Report

Use the built-in reports and views to help manage your assets and inventory.

Search by asset number, asset code and asset type and generate latest update of the asset.

Report can be exported to Excel and PDF format for audit and paperwork purposes.

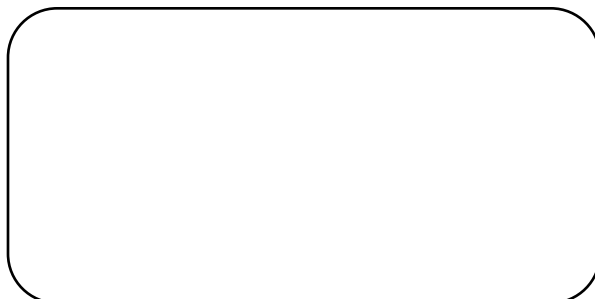

Integration with Barcode Printing

The system is integrated with Barcode Printer and Barcode Scanner solutions (with optional of RFID solution).

Mobile scanner or reader solutions is available to ensure easy tracking during audit and stock checking activities.
